

# LOOK AROUND

The large wasps that you see around are

**Cicada Killer Wasps.**

The male wasp does not have the capacity to sting. The female wasp

is very docile and will not sting unless provoked. The female wasp makes a nest about 10 inches into the sand. Then she kills a cicada and takes the cicada into her nest in the sand to feed her larvae. The life span of these wasps is 2-3 weeks.

These wasps are something special to see. They are one of the largest insects found in Ohio. More information about these wasps is available in the office, Monday - Friday, 8:30 - 5:00 pm.
